## REVERSE

## HELOC VS HECM LOC

## Paying the Interest

We all know that some clients cross shop reverse mortgages and HELOCs and an attractive feature of a HELOC is only requiring interest-only payments for the first 10 years. While HECMs don't require monthly payments', the loan balance increases over time.

## What if the borrower does make interest and annual MIP payments each year, like they would on a HELOC. Here's the scenario:

A 62-year-old borrower who is still working, plans on retiring at age 70, they would like to pay off their existing mortgage,
but they're concerned about future equity since they are still young. Getting a HECM now would allow them to eliminate their largest monthly payment. However, they would still like to make interest and MIP payments until they retire so the balance remains low, and the LOC grows!

| Youngest Borrower | 62 | Beginning Loan Balance | $\$ 116,080$ | Loan Balance - Year 8 | $\$ 116,084$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Expected Rate | $6.88 \%$ | Beginning LOC | $\$ 10,720$ | LOC Balance - Year 8* | $\$ 112,249$ |

Making monthly payments of approximately $\$ 738$ until they retire at age 70 could keep their loan balance nearly constant and increase their line of credit balance tenfold.
